

Professional Installations of Esperer.H2O Hydration Machines

Dr. Rashid Buttar

Dr. Rashid A. Buttar is a graduate of the University of Osteopathic Medicine and Health Sciences, College of Medicine and Surgery. He trained in General Surgery and Emergency Medicine and served as Brigade Surgeon and Director of Emergency Medicine while serving in the U.S. Army. Dr. Buttar is board certified in Clinical Metal Toxicology, Preventive Medicine, is board eligible in Emergency Medicine and has achieved fellowship status in three separate medical societies.

Dr. Buttar also serves as Director of Clinical Research and Development for V-SAB Medical Laboratories where he is extensively involved in research with polypeptide and peptide analog sequencing and identification technologies as well as innovative methodologies for drug delivery mechanisms. In addition, Dr. Buttar is heavily involved in clinical outcome based research and response based studies with various groups including personal interest, private Bio Tech companies, university based projects and governmental sponsored clinical research. Dr. Buttar has lectured worldwide on these subjects at scientific congresses and professional symposiums, and is a frequently invited presenter at medical conferences. He has appeared and been featured in local, national and international media including newspapers, radio and TV. He has been interviewed by numerous news journals including the Wall Street Journal, US News and World Report, TIME Magazine, Boston Globe and the New York Times. His first book, "The 9 Steps to Keep the Doctor Away" released in 2010 became a Wall Street Journal, USA Today and Amazon.com best seller and has since, become an international best seller now translated into 5 languages.

Dr. Douglas J. Phillips

Douglas J. Phillips had previously practiced General Dentistry for over thirty-eight years. In the late 1970's, his traditional, restorative practice began to shift to a more specialized focus--patients with chronic headache, facial pain, and jaw dysfunction. He became increasingly interested in why some of these patients healed with traditional treatments, while others did not.

Dr. Phillips now treats people with chronic pain and illness using natural means. Herbal nutraceuticals and antimicrobial immune system peptides that kill unwanted organisms, natural supplements of very high purity that rebuild and nourish, non-drug detoxification of heavy metals, toxic solvents, herbicides, pesticides & fungicides and an advanced integrated desensitizing procedure is used in his natural practice of Theocentric Holistic Healing. Applied Psycho Neurobiology and Family Systemic Therapy are used to manage the all-important emotional aspect present in all diseases. Dr. Phillips treats the energetic aspect of everything from chronic fatigue, fibromyalgia and cancer to Lyme disease and multiple chemical sensitivity. Dr. Phillips aims at the cause of the problem, not just its symptoms.

Dr. Ralph Holsworth

Ralph E. Holsworth, Jr. received his Doctor of Osteopathy in 1997 from The University of Health Sciences, College of Osteopathic Medicine, Kansas City, MO. He is a board-certified osteopathic family physician previously serving rural and underserved regions of New Mexico and Colorado. Prior to his medical training, Dr. Holsworth served as environmental scientific consultant with the US EPA and private sector firms providing technical assistance on Superfund site evaluation, remediation and environmental cleanups. He received his Baccalaureate of Science, Majoring in Geochemistry from The University of Texas, El Paso, in 1985. In 1977-1981, Dr. Holsworth was a Nuclear Power Plant Propulsion Operator for the United States Navy.

Dr. Holsworth treats a wide variety of health conditions, with special interest in cardiovascular conditions (especially problems related to increased blood thickness that respond to the therapeutic aspects of Nattokinase), auto-immune problems, diabetes, and environmental illness.

Dr. Holsworth served as Director of Clinical and Scientific Research for Essentia Water; served as honorary professor, Department of Biology, at the University of Colorado at Colorado Springs and is a member of the editorial board for the Journal of Applied Clinical Thrombosis and Hemostasis and the Japan Nattokinase Research Association. He has been involved in clinical research with oral systemic enzymes as an adjuvant in cancer treatment and has authored several publications related to antioxidant properties of electrolyzed water and nattokinase, a fibrinolytic enzyme.

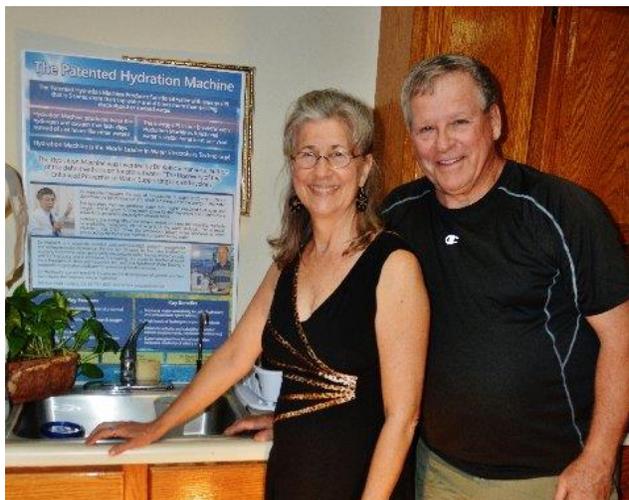

[Dr. Holsworth will install his Esperer.H2O Hydration Machine once he completes the installation of a reverse osmosis system plus remineralizer that will provide the source water for the electrolyzer]

Hollywood Birth Center (Dr. Kurt Marin and Debbie Marin)

Debbie Marin is the owner of the Hollywood Birth Center and has been a licensed midwife for over 20 years. In 1983 Debbie had her first daughter, a water birth at home in a state where direct entry midwifery was not legal. That experience was just the beginning. For several years Debbie attended births as a lay midwife and in 1998, upon returning to Florida she attended the South Florida School of Midwifery for 3 years. Debbie was instrumental in helping to change the midwifery law to allow more licensed midwives to practice in Florida including serving as president of the Broward chapter of Friends of Midwives. She wrote a midwifery curriculum that was implemented in a National School of Technology in South Florida and was the clinical director, administrator, teacher and a student in that program. The two classes of women she graduated have gone on to become midwives in Florida. Debbie opened The Hollywood Birth Center in 1993 and has since trained countless midwives. She has dedicated her life to empowering women and keeping birth safe.

Dr. David Blyweiss

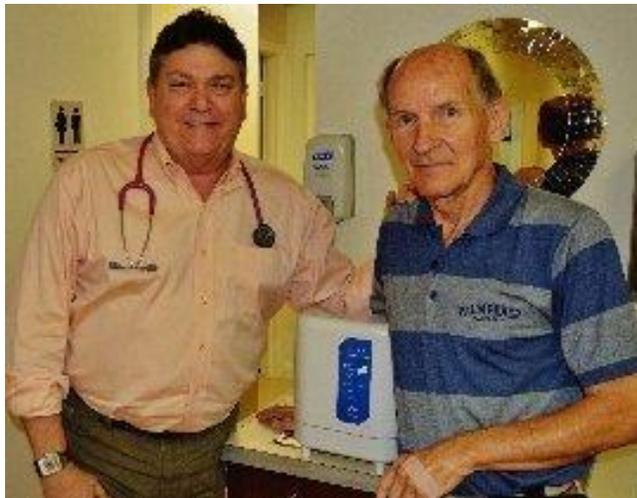

David J. Blyweiss, MD began his medical career as a clinical pharmacist in South Florida prior to earning his medical degree from St. George's University School of Medicine in 1982. This dual background allowed him to appreciate the relevance of conventional pharmaceutical/surgical based treatments in acute medical conditions, but also to recognize where these approaches fell short in treating the majority of patients who suffered from the chronic degenerative diseases of "western civilization origin".

Over the last twenty years, with the nutritional medical knowledge base expanding in the fields of nutrigenomics, proteomics and other related "orthomolecular" disciplines directed towards patients' biochemical individuality, Dr. Blyweiss became an early adherent and experienced practitioner of what would become known as "functional medicine". Dr. Blyweiss has used this matrix of systems biology to effectively manage and alleviate the symptoms related to the most "difficult-to-treat" conditions by addressing the underlying causes, allowing the body to heal itself.

Dr. Blyweiss was one of the researchers doing the early work on chlorhexidine (phisoHex) while earning his first post graduate degree at Temple University School of Pharmacy. During medical school he worked with the WHO (World Health Organization) in vaccinating children in the islands of the Caribbean. He has traveled the world, most recently to Gabon and Croatia working closely with teams of specialists to identify new plant life and natural products for possible human benefit. He has consulted for and created state-of-the-art nutritional supplements for multiple nutritional companies since 1999. His most recent accomplishment was forming Eden Laboratories Ltd. doing stem cell research and transplants in Belize, CA.

[Purchase and installation expected in near future]

Dr. Anup Kanodia

Family, Integrative and Functional Medicine

Education and Training: Institute of Functional Medicine and Masters in Public Health from Harvard School of Public School of Public Health

Fellowship: Harvard Medical School Complementary and Integrative Medicine Fellowship

Family Medicine Residency: Mayo Clinic

Medical School: Northeastern Ohio Medical University

As a classically trained physician, it did not take me long to realize that my initial medical school training was not enough for me to fundamentally help people achieve true, long lasting health. Early in my residency, I began to notice that the symptom/drug approach worked for acute problems, such as severe bacterial infections and heart attacks, but this model was fundamentally flawed for chronic health conditions. It did not and does not work. The reason this model is inadequate is because it is entrenched in dispensing pharmaceuticals that often have severe side effects and not in how to search for the “root” cause and treat the person, not just their symptom.

My original passion in medicine took on a whole new meaning and my mission was now clear: dig for the root cause, identify it, treat it and eliminate it. This process is the key to help people transform their health and empower them to live the joyful life they were meant to live.

[Esperer.H2O system will be installed in his office by the end of April]

Non-Medical Professional Installation

Several companies interested in sustainable housing (Fortis Groep USA, SunSky, Plarr House) have formed Indian Sustainable Design Living LLC to provide sustainable housing to American Indians. An integral part of the home design will include advanced water treatment and functional water systems.

An Esperer.H2O Hydration Machine is currently installed in the Fortis Groep facility in South Florida. They are interested in offering the Hydration Machine as an option for all of their projects.
